

Labelling Instruction

Approved labels

To ensure the returnable system works, it is important that the reusable crates are handled correctly. By using the right label in the right place, you are helping to keep our crates clean and reusable in the long-term.

Note that unapproved labels may stick to the crates. Our quality assurance system approves labels of a maximum 22 cm² on the crate (4,7 x 4,7 cm). When approved labels are used on the intended rough surface, they are easily removed in the washing process.

The below labels have been tested and approved and fulfil our labelling requirements.

 Eco quality labels are not recommended for marking crates used in damp and chilled environments because they absorb moisture and fall off.

 The following labels and adhesives have been tested by Svenska Retursystem for use in cold application environments and frozen (-28°C) storage, as well as during transport.

Where to put the label

Labels may only be applied to the intended space; i.e., on rough, textured surfaces and not on smooth surfaces or over the bars or edges of the crates.

The images and information below show the maximum size of labels and where they may be placed.
